Experiment – 7:

Continuous-Time Fourier Transform and Spectrum

OBJECTIVES

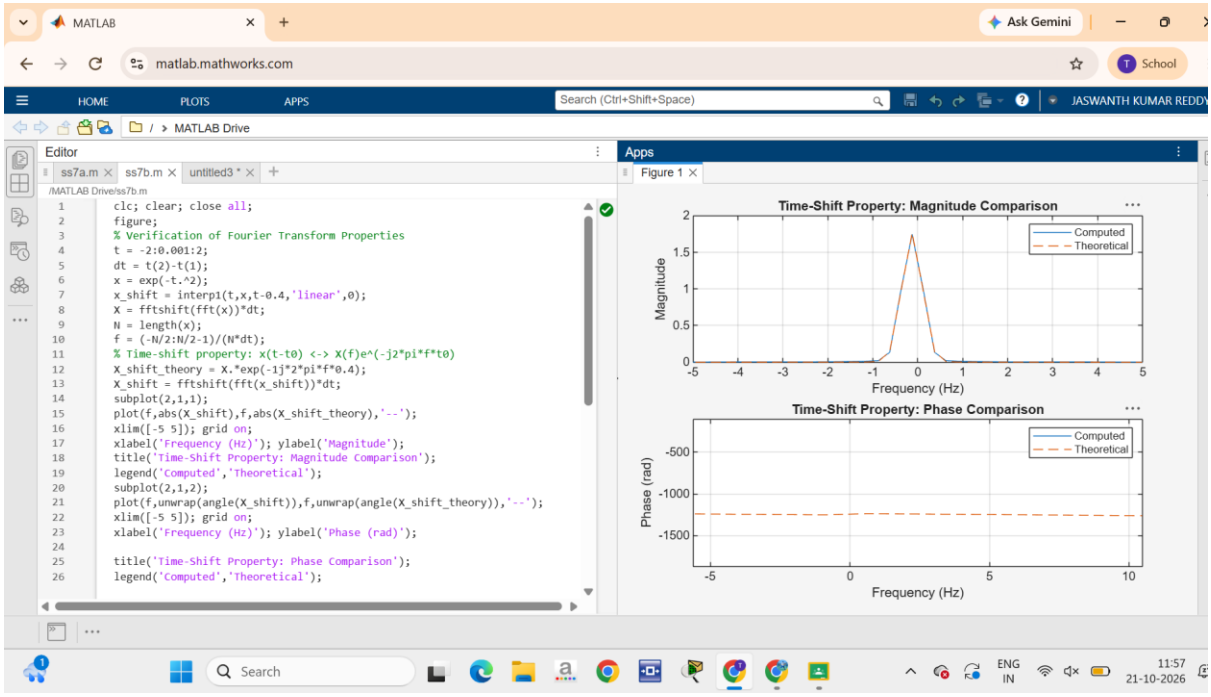

(i) To determine the magnitude and phase spectra of continuous-time signals and analyze their significant spectral components.

Output Graphs:

(ii) To verify important Fourier transform properties and examine their effects on the corresponding time-domain and frequency-domain representations.

Output Graphs:

Result: The continuous-time Fourier transform was applied to analyze signals in the frequency domain, and their magnitude and phase spectra were obtained.
