Experiment No. 1

Generation and Classification of Continuous-Time and Discrete-Time Signals

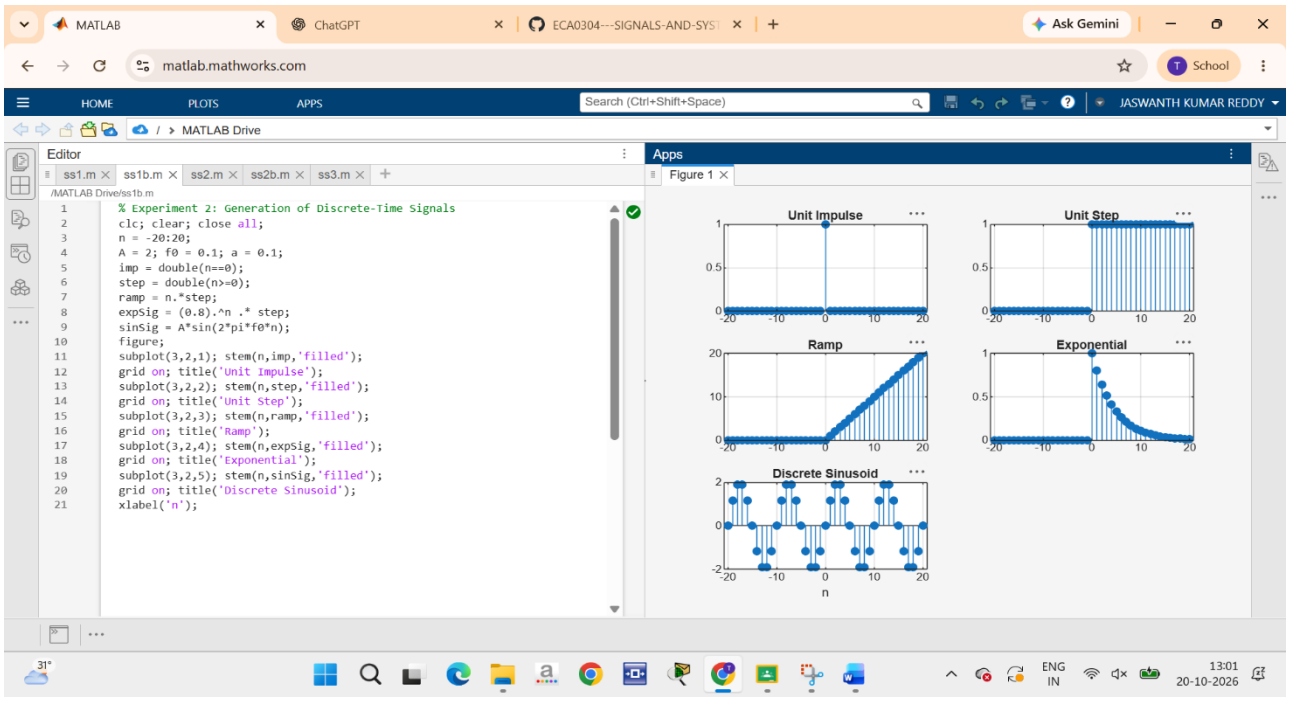

(i) To generate and visualize basic continuous-time signals such as unit step, unit impulse,ramp, sinusoidal, and exponential signals.

Output Graph:

(ii) To generate and visualize basic discrete-time signals and analyze their amplitude and time-index characteristics.

Output Graph:

Result: Continuous-time and discrete-time signals were generated and plotted successfully using MATLAB. The signals were classified as periodic or aperiodic, and even and odd components were obtained to reconstruct the original signal.
